channels.js
-----
-----
ADMIN CONFIGURATION FILE.

This is the ONLY file you need to touch
to add/remove YouTube channels that
Haryanvi Charts tracks. Everything else
(fetching, ranking, rendering) is
fully automatic – add a channel here and
it will appear on the site after
the next page load / cache refresh.

HOW TO ADD A CHANNEL
-----
-----
1. Go to the channel's YouTube page.
2. Get its Channel ID (starts with
"UC..."). Easiest ways:
    a. View page source and search for
"channelId".
    b. Use a free tool like
https://commentpicker.com/youtube-channel-id.php
    c. If you only have a video URL,
open it, click the channel name,
then copy the ID from the
```

resulting /channel/UC... URL.

3. Add a new object to the CHANNELS array below:

```
{ id: "UCxxxxxxxxxxxxxxxxxxxxxxxx",  
  name: "Channel Display Name" }
```

4. Save the file, commit, and push. No other code changes needed.

There is no limit on how many channels you can add. More channels = more

YouTube Data API quota used per refresh, so see CONFIG.CACHE_TTL_MINUTES

below if you add a lot of channels and want to conserve your daily quota.

```
=====  
===== */
```

```
// Shared global namespace used by every  
script file (channels/api/ranking/app)  
// so we can avoid ES module imports  
entirely – this keeps the site a plain  
// static site that runs directly on GitHub  
Pages with zero build step.  
window.HVC = window.HVC || {};
```

```
/**  
 * The list of YouTube channels Haryanvi  
Charts pulls songs from.  
 * "name" is a friendly display fallback;  
the real channel title & avatar  
 * are fetched live from YouTube and used  
wherever possible.  
 */
```

```

window.HVC.CHANNELS = [
  { id: "UC3Zva7aW8lJUFZQYnC-XyHg", name:
    "T-Series Haryanvi" },
  { id: "UCbYXVxwDEWc9sIt6yZhweqQ", name:
    "Nav Haryanvi" },
  { id: "UC3zVeAaoPEN1Tu25dW3G2Ig", name:
    "Sonotek" },
  { id: "UCQuLyitHTE9LfUAxlhDfgig", name:
    "White Hill Dhaakad" },
  { id: "UC_wRxe9t0FevlxOfDpRKuMw", name:
    "Speed Records Haryanvi" },

    "Mor Haryanvi" },
  // { id: "UCxxxxxxxxxxxxxxxxxxxxxx",
name: "Add Your Channel Here" },
];

/**
 * Site-wide tunable settings. Nothing here
requires touching api.js,
 * ranking.js or app.js.
 */
window.HVC.CONFIG = {
  // -----
  -----
  // FIRESTORE MODE (Admin Panel
integration)
  // -----
  -----
  // When true, the public site reads
songs/artists/news from Firestore in
  // real time (populated by the /admin

```

```
dashboard) instead of calling the
  // YouTube API directly in every
visitor's browser. This is the
  // recommended mode once you've set up
/admin – it's faster, uses zero
  // YouTube quota for visitors, and
updates instantly when an admin makes
  // a change. Set to false to fall back to
the original direct-YouTube
  // fetch behavior (no Firebase project
required in that case).
  USE_FIRESTORE: true,

  // -----
-----
  // YOUTUBE DATA API KEY
  // -----
-----
  // Paste your own YouTube Data API v3 key
between the quotes below.
  // See README.md → "Get a YouTube API
Key" for step-by-step instructions.
  // The key is used client-side (this is a
static site with no backend),
  // so make sure you restrict it to your
GitHub Pages domain + the
  // YouTube Data API v3 in the Google
Cloud Console.
  API_KEY: "YOUR_YOUTUBE_API_KEY_HERE",

  // How many of each channel's most recent
uploads to pull per refresh.
  // Higher = more complete charts, but
costs more API quota per refresh.
```

```
VIDEOS_PER_CHANNEL: 25,

// How long fetched data is cached in the
browser (localStorage) before
// being re-fetched from YouTube, in
minutes. Raise this if you are
// worried about hitting your daily quota
(10,000 units/day on the
// default free tier). Each full refresh
costs roughly:
// (channels × 1 unit for channel info)
// + (channels × 1 unit per 50 videos for
playlist paging)
// + (ceil(totalVideos / 50) unit(s) for
video details)
CACHE_TTL_MINUTES: 30,

// Songs newer than this many days are
eligible for "New Releases".
NEW_RELEASE_WINDOW_DAYS: 21,

// Songs newer than this many days are
eligible for "Fastest Rising"
// (keeps long-standing catalog hits from
crowding out real momentum).
RISING_WINDOW_DAYS: 45,

// How many songs/artists each homepage
section shows.
SECTION_SIZES: {
